Phytochemicals Signal Transduction and Neurological Disorders

Phytochemicals are heterogeneous group of bioactive compounds produced by plants which are extensively researched by scientists for their health promoting potentials in human diseases Unlike vitamins and minerals phytochemicals are not required for sustaining cell viability but they play an important role in protecting tissues and cells from the harmful effects of oxidative stress and inflammation Examples of phytochemicals include catechins resveratrol ginkgo biloba curcumin and sulfur compounds found in garlic Although the precise molecular mechanisms associated with beneficial effects of phytochemicals still remain the subject of intense investigations but it is becoming increasingly evident that phytochemicals mediate their effects by counteracting reducing and repairing the damage caused by oxidative stress and neuroinflammation In addition phytochemicals also stimulate the synthesis of adaptive enzymes and proteins through the stimulation of a transcription factor called Nrf2 and induction of phase II detoxifying enzymes Consumption of phytochemicals induces neurohormetic response that results in the expression of adaptive stress resistance genes that are responsible for encoding antioxidant enzymes protein chaperones and neurotrophic factor BDNF Based on the stimulation of signal transduction network and adaptive stress resistance genes it is proposed that the use of phytochemicals from childhood to old age along with regular exercise is an important strategy for maintaining normal aging and delaying onset of age related neurological disorders stroke Alzheimer disease and Parkinson disease

Phytochemicals Signal Transduction and Neurological Disorders presents readers with cutting edge and comprehensive information not only on bioavailability and mechanism of action of phytochemicals in the brain but also provides the molecular mechanism associated with beneficial effects of phytochemicals in neurotraumatic stroke spinal cord trauma and traumatic brain injury and neurodegenerative Alzheimers disease Parkinson disease Huntington disease and amyotrophic lateral sclerosis diseases **Journal of the**

Dirty War and hundreds of trials have commenced in the country's civilian courts. Among the many facets of the book, Ferguson takes an in-depth look at allegations that Father Jorge Mario Bergoglio, now Pope Francis, was involved in the disappearance of two Jesuit priests under his supervision in 1976. Bergoglio was called to testify in a closed chambers session. Ferguson reviewed those secret proceedings and uses them as a springboard to explore the Argentine Catholic Church and its broader role in the Dirty War. The lingering but acute trauma of the victims who testified at the trial underscores the moral urgency of accountability. When a state strips its citizens of all their rights, the only response that approximates reparation is to restore the rule of law and punish the perpetrators. Yet the trial also revealed the limits of using criminal law to respond to mass atrocity. Justice demands a laser-like focus on evidence relevant to a crime, but atrocity begs for social understanding. Can the law ever bring full justice?
