This ambitious work chronicles 250 years of the Cromartie family genealogical history Included in the index of nearly fifty thousand names are the current generations and all of those preceding which trace ancestry to our family patriarch William Cromartie who was born in 1731 in Orkney Scotland and his second wife Ruhamah Doane who was born in 1745 Arriving in America in 1758 William Cromartie settled and developed a plantation on South River a tributary of the Cape Fear near Wilmington North Carolina On April 2 1766 William married Ruhamah Doane a fifth generation descendant of a Mayflower passenger to Plymouth Stephen Hopkins If Cromartie is your last name or that of one of your blood relatives it is almost certain that you can trace your ancestry to one of the thirteen children of William Cromartie his first wife and Ruhamah Doane who became the founding ancestors of our Cromartie family in America William Jr James Thankful Elizabeth Hannah Ruhamah Alexander John Margaret Nancy Mary Catherine Jean Peter Patrick and Ann E Cromartie These four volumes hold an account of the descent of each of these first generation Cromarties in America including personal anecdotes photographs copies of family bibles wills and other historical documents Their pages hold a personal record of our ancestors and where you belong in the Cromartie family tree *Scots Magazine, and Edinburgh Literary Miscellany* ,1747 *Geophysics and Space Data Bulletin* ,1966 The Symphonic Repertoire, Volume IV A. Peter Brown,2024-03-29 Central to the repertoire of Western art music since the 18th century the symphony has come to be regarded as one of the ultimate compositional challenges Surprisingly heretofore there has been no truly extensive broad based treatment of the genre and the best of the existing studies are now several decades old In this five volume series A Peter Brown explores the symphony from its 18th century beginnings to the end of the 20th century Synthesizing the enormous scholarly literature Brown presents up to date overviews of the status of research discusses any important former or remaining problems of attribution illuminates the style of specific works and their contexts and samples early writings on their reception The Symphonic Repertoire provides an unmatched compendium of knowledge for the student teacher performer and sophisticated amateur The series is being

launched with two volumes on the Viennese symphony Volume IV The Second Golden Age of the Viennese Symphony Brahms Bruckner Dvor k Mahler and Selected Contemporaries Although during the mid 19th century the geographic center of the symphony in the Germanic territories moved west and north from Vienna to Leipzig during the last third of the century it returned to the old Austrian lands with the works of Brahms Bruckner Dvor k and Mahler After nearly a half century in hibernation the sleeping Viennese giant awoke to what some viewed as a reincarnation of Beethoven with the first hearing of Brahms s Symphony No 1 which was premiered at Vienna in December 1876 Even though Bruckner had composed some gigantic symphonies prior to Brahms s first contribution their full impact was not felt until the composer s complete texts became available after World War II Although Dvor k was often viewed as a nationalist composer in his symphonic writing his primary influences were Beethoven Schubert and Brahms For both Bruckner and Mahler the symphony constituted the heart of their output for Brahms and Dvor k it occupied a less central place Yet for all of them the key figure of the past remained Beethoven The symphonies of these four composers together with the works of Goldmark Zemlinsky Schoenberg Berg Smetana Fibich Jan cek and others are treated in Volume IV The Second Golden Age of the Viennese Symphony covering the period from roughly 1860 to 1930 Magnetograms and Hourly Values, San Juan, Puerto Rico U.S. Coast and Geodetic Survey. The Dingley Tariff United States,1897 **Stagecraft Fundamentals** Rita Kogler Carver,2009-01-07 Stagecraft Fundamentals Second Edition tackles every aspect of theatre production with Emmy Award winning author Rita Kogler Carver s signature witty and engaging voice The history of stagecraft safety precautions lighting costumes scenery career planning tips and more are discussed illustrated by beautiful color examples that display step by step procedures and the finished product This second edition offers even more in demand information on stage management drawing and drafting both by hand and CAD lighting fixtures and special effects Also new to this edition are current articles from Lighting and Sound America brand new diagrams that illustrate hard to grasp concepts and a plethora of information on European conversions standards and practices making the skills you learn applicable to stage jobs on either side of the ocean The accompanying website www.stagecraftfundamentals.com is bursting with additional material such as an instructor s manual exercises and study questions that coincide with chapters from the book CAD drawings color theory manufacturing information and so much more to help you along the way as you learn all about the world of theatre production Praise for the Book Beautifully written The author has succeeded in relaying technical theatre information without being too technical and putting the reader to sleep I read three sentences and instantly knew this book was for me and the way I teach When I think back on the insufferable intro to tech theatre books I had to read I feel cheated I didn t have this one as a student I will be using this text in my class Rob Napoli Designer and Technical Director at Penn State University Berks Campus This text has tempted me to return to teaching with a textbook for the first time in seven years The language is both accessible and informal yet the text goes a long way in debunking some of the typical jargon that

may alienate students just getting into the field or trying it out for the first time The illustrations the text is full of them coupled with the stories reinforce the fundamental information being conveyed John Paul Devlin Associate Professor of Theatre at Saint Michael s College What a great idea Thank heavens someone is doing this for students at that impressionable age That has been one of my mantras education of teachers and students on the use of scenic materials The teachers don t have enough time in college to learn and do everything they have to teach Most get thrown into the theatre area by default and struggle with designing building painting the scenery Jenny Knott Rosco Stagecraft Fundamentals is beautifully illustrated throughout and the profusion of color on every page gives this textbook the appearance of a coffee table book The writing is clear and personal which should be very appealing to students Rita Carver covers all aspects of theatre production from scenery to lighting to an actor s makeup Her close ties to the New York theatre scene gives this book a special insight into the professional world one that goes well beyond what is found in most college textbooks John Holloway Professor in the Theatre Department at the University of Kentucky and President of the International Association of Theatrical stage Employees IATSE Local 346 I can t thank you enough for Stagecraft Fundamentals I have been teaching stagecraft since 1976 and you have saved me from the nightmare of writing a text to suit my class needs After two semesters with your text I have found that I had more time to develop the skills necessary within the classroom than before The humor that you have infused in the book has enticed my students to read on That alone makes this text invaluable Meta Lasch Assistant Professor West Liberty University Tariff Acts of 1883, 1890, 1894 1897 United States, 1890 *Specifications in Detail* Frank W. Macey, 2015-10-06 Sir Roger Pratt s Rules for the Guidance of Architects written on 7 December 1665 included the following statements which embody succinctly the principles of the specification of building works and indeed of contract administration and are as true today as they were nearly 350 years ago To determine anything without due premeditation is rashness Not to come to any determination in a convenient time is an effect either of ignorance or sloth To wittingly omit to do that at the first which at last we shall be forced to at our greater disadvantage is the extremity of folly To be so forward in premeditation as to make no trade at a stand for want of direction which will cause great repining etc and to be careful to see them exactly performed for otherwise all trades will be at catch with him To contrive all things with the most orderly thrift and longest duration However Pratt seems to have relied on entrusting the works to known competent workmen rather than incorporating these wise principles in a written specification This method of working appears to have continued until the rise of the general contractor in the nineteenth century when a written specification became an essential part of the design process The specification was needed to describe the materials to be used and ways of working them and to ensure comparability of tenders particularly for public works This encouraged books on specifications starting with Alfred Bartholomew s Specifications for Practical Architecture in 1840 revised in 1846 It began with a long essay on the decline of excellence in the structure and in the science of modern English buildings with the proposal of remedies for those defects

This was followed by 54 specifications for various types and classes of buildings notes on various materials and an alphabetical digest of the London Building Act with a comprehensive index a multi purpose book like many of its successors Noting that Bartholomew was no longer in print T L Donaldson was prompted to produce his Handbook of Specifications in 1859 in which after setting out the principles of specification writing he reproduced 46 specifications for actual buildings and other works by his illustrious contemporaries This included the Houses of Parliament by Sir Charles Barry and Newcastle High Level Bridge by Robert Stephenson and was followed by 136 pages on the law as applied to building matters This is a fascinating book invaluable to construction historians but will have been of less use to authors of specifications than a sequential list of trade based clauses Bartholomew s book was revised again twice by Frederick Rogers in 1886 and 1893 but still with a similar essay followed by specifications for various types of building but now only 27 rather than trade based clauses for which we had to wait for the first edition of Macey in 1898 Frank W Macey s predecessors had a tendency to set out what should be covered in specifications and the ills of poor specification together with a quantity of information about the use of various materials and construction methods This was admittedly useful but better covered in the books on building construction that had started to appear at about the same date such as Mitchell and Rivingtons published in facsimile by Donhead in 2004 Macey by contrast dived almost straight in to trade based clauses in a logical order The specification author in an architect s office must have heaved a sigh of relief when Macey landed on his desk because here was a book that provided just what he needed to cut and paste in the order he needed it and with marginal sketches showing how the materials and details were applied Similarly students of architecture had a useful source of reference for the work by the various trades instead of having to look at the trade in each specification when referring to earlier books to decide which example to follow Contemporary reviews of Macey criticized the book for being out of date as he failed to cover all the latest developments in materials In hindsight that attitude appears less than fair because any architect incorporating recently introduced materials such as reinforced concrete or metal lathing would make sure he was fully conversant with them and their use and would be able to describe them adequately as a matter of common prudence No book would be able to keep up to date with the rapidly developing variety of materials appearing almost daily at the dawn of the Edwardian era That was more than adequately addressed by the annual initially quarterly Specification published by the Architectural Press which started the same year that the first edition of Macey was published and continued to keep construction professionals informed every year until 1992 Frank Macey revised and enlarged the text in 1904 for the second edition having published his companion volume on Conditions of Contract in 1902 and taking account of criticisms in The Builder s review of his first edition It is his second edition that this introduction accompanies having been chosen by Donhead to give us an exhaustive reference to the materials and construction in use at the end of the Victorian era and the dawn of the twentieth century It will also help us today when drafting specifications for work on buildings that have just passed their centenary Frank William

Macey 1863 1935 practised as an architect in the City of London before emigrating to Canada He was the first resident architect in Burnaby in British Columbia where he settled in the first decade of the twentieth century and obtained a number of commissions from prominent businessmen who were building grand homes in the new community of Deer Lake He designed predominantly in the British Arts and Crafts style and introduced the use of rough cast stucco for building exteriors a characteristic for which he was renowned He also designed three churches two of which are still standing Macey s Specifications in Detail survived his departure to Canada The third edition co authored by J P Allen PASI was published in 1922 and the fourth edition revised by Donald Brooke MA BArch ARIBA MStructE a Lecturer in Architecture at the University of Liverpool and J W Summerfield FASI MRSanI a quantity surveyor was published in 1930 with a second impression in 1937 The fifth edition revised by the then late Donald Brooke and Stanley Wilkinson BArch ARIBA a Senior Lecturer in Architectural Construction at the University of Liverpool was published in 1955 and takes specification writing through to the introduction of the National Building Specification in 1973 continuing where Macey had started with trade based clauses in a logical order A contemporary reviewer of the first edition praised so much that is excellent in the book and so many things explained of which the young architect would have much difficulty in finding a description in other books The fact that Macey gave a great amount of practical information as to the details of construction on points which are not usually to be met with in text books means that this facsimile should find a place on the bookshelves of construction professionals from all disciplines today alongside Donhead s other facsimiles as a well indexed guide to what they can expect to find when working on late Victorian and Edwardian buildings Students of conservation practice may like to note this comment from the same contemporary reviewer It may therefore be looked upon as a guide to the young architect in practical matters quite as much as a model for specification writing It indeed attempts to furnish the novice with the knowledge that he ought to possess before sitting down to write a specification If Macey s book was valued a hundred years ago for these reasons there is all the more reason today to use it as a reliable reference to what will be found in buildings that have celebrated their centenary Lawrance Hurst August 2009 Suffolk Surnames Nathaniel Ingersoll Bowditch,1861 **Water-supply Paper** ,1941 *Final Bulletin of the Proceedings of the Wisconsin Legislature* Wisconsin.
