illustrates the importance of flight deck communication in flight safety through a simulator study of how and what pilots communicate. This investigation utilized a computer based linguistic method of text analysis as well as a micro coding of communication content. Analyses of simulator transcripts demonstrated that several language dimensions were associated with higher performance, fewer errors and better communication. The ways in which pilots used language varied as a function of crew position and level of workload. Additionally, language use in the first flight of a crew pairing was associated with performance in subsequent flights.

**Group Interaction in the Cockpit**

**Some Linguistic Factors**

Manfred Krifka, Silka Martens and Florian Schwarz

For a number of years it has been recognized that the social dynamics of group interaction is an important factor in the origin of accidents and in the way how accidents or accident prone situations are handled in aviation (cf. Helmreich 1997a, 1997b). Factors related to interpersonal communication have been implicated in up to 80% of all aviation accidents over the past 20 years. As a reaction to this, Crew Resource Management (CRM) has been developed with the goal of rating and improving crew performance in aviation and in other fields in which professional groups interact in situations of high taskload and potential risk (cf. Helmreich et al. 1999). As far as this can be estimated at all, installing CRM techniques in the major American and European airlines has resulted in a definite improvement in the safety of commercial aviation. In spite of this success, CRM practitioners in the field feel that beyond the general social dynamics of group interaction there might be potential problems relating to language and communication in such settings. In this article we first summarize some aspects of previous research in this area. Then we report findings from a project that one of us, Manfred Krifka, has carried out using transcripts of flight simulator sessions with pilots of a commercial American airline. We will discuss some of the problems of this project. Finally we describe an ongoing continuation of that project that uses flight simulator sessions with pilots of a commercial German airline.

**Ethics With Aristotle** Sarah Broadie  
Professor of Philosophy Princeton University, 1991-01-10

In this incisive study Sarah Broadie gives an argued account of the main topics of Aristotle's ethics: eudaimonia, virtue, voluntary agency, practical reason, akrasia, pleasure and the ethical status of theoria. She explores the sense of eudaimonia, probes Aristotle's division of the soul and its virtues and traces the ambiguities in voluntary. Fresh light is shed on his comparison of practical wisdom with other kinds of knowledge and a realistic account is developed of Aristotelian deliberation. The concept of pleasure as value judgment is expounded and the problem of akrasia is argued to be less of a problem to Aristotle than to his modern interpreters. Showing that the theoretic ideal of Nicomachean Ethics X is in step with the earlier emphasis on practice as well as with the doctrine of the Eudemian Ethics, this work makes a major contribution towards the understanding of Aristotle's ethics.
