Stephen J. Guastello,2013-05-13 Whether talking about steering a wheelbarrow over rugged terrain or plotting the course of  
international relations human performance systems involve change Sometimes changes are subtle or evolutionary sometimes  
they are catastrophic or revolutionary and sometimes the changes are from periods of relative calm to periods of vibrant  
oscillations to periods of chaos As a general rule more complex systems are likely to produce more complex forms of change  
Although social scientists have long acknowledged that change occurs and have considered ways to effect desirable change  
the dynamical processes of change have been poorly understood in the past This volume combines recent advances in  
mathematics and experimental design with the best available social science theories to produce a new integrated and  
compact theory of work organizations and social evolution The domains of application extend from human decision making  
processes to personnel selection and work motivation work performance under conditions of stress accident and health risk  
analysis the development of social institutions and economic systems creativity and innovation organizational development  
and group dynamics and political revolutions and war Relative to other literature on nonlinear dynamical systems theory  
NDS this book is unique in that it integrates new developments in NDS with substantive psychological theory It builds on  
many recent developments in organizational theory to show that nonlinear dynamics were often implicit in those works all  
along The result is an entirely new way of viewing social events understanding change processes and asking questions about  
social systems This book also contains much new empirical work and explains the newly developed methods for testing these
