Science and Engineering of Casting Solidification Doru Michael Stefanescu,2013-03-14 We come to know about the world in two distinctive ways by direct perception and by application of rational reasoning which in its highest form is mathematical thinking The belief that the underlying order of the world can be expressed in mathematical form lies at the very heart of science In other words we only know what we can describe through mathematical models Casting of metals has evolved first as witchcraft to gradually become an art then a technology and only recently a science Many of the processes used in metal casting are still empirical in nature but many others are deep rooted in mathematics In whatever form casting of metals is an activity fundamental to the very existence of our world as we know it today Foundry reports indicate that solidification modeling is not only a cost effective investment but also a major technical asset It helps foundries move into markets with more complex and technically demanding work The ability to predict internal soundness allows foundries to improve quality and deliveries and provides the information required to make key manufacturing decisions based on accurate cost estimates before pattern construction even begins The acceptance of computational modeling of solidification by the industry is a direct result of the gigantic strides made by solidification science in the last two decades
